FOR IMMEDIATE RELEASE

CTS Releases 228A/B/C for Medical and Audio Applications

Lisle, IL – CTS Corporation (NYSE: CTS) has added a new LED illuminated tact switch product series to the tact switch product family. The 228A and 228B products contain a single LED color display with a bi-color option, which is independent from the switching function. The 228C product contains a multiple LED color display to provide single, dual or triple color options. The LED colors are selected through the PCB circuit, which provides flexibility to the developer of the end use product.

The robust contact structure provides an excellent tactile feedback to the user, with a switch life of up to 100,000 cycles. The LED color options combined with other product features makes these tact switch series suitable for the target applications shown below. All three new product series are available in a compact size of 7.2mm x 6.8mm for the 228A/228C Series, and 7.2mm x 6.0mm for the 228B Series. The actuator travel is 0.25mm for each of the new products. These new tact switches will be available beginning in May of this year.

Applications Include:

- | | | |
|-------------------------|------------------------|--------------------------|
| ▪ Medical Panel Control | ▪ Instrumentation | ▪ Automotive Electronics |
| ▪ Fitness Equipment | ▪ Security Systems | ▪ Game Accessories |
| ▪ Audio/Video | ▪ Portable Electronics | ▪ Healthcare Devices |
| ▪ Consumer Electronics | ▪ Servers | ▪ White Goods |

This new CTS model series adds to an extensive line of tact switch products, supporting a wide range of color displays from single circuit to triple circuits. The complete product listings and data sheets can be found at www.ctscorp.com/sense_product_line/tactile-switches/.
