¹Articles manufactured within the semiconductor industry may include Boron or Lead containing glass. In some cases, Di-boron Trioxide and Lead Oxide may have been declared as a substance exceeding 0.1% by weight within various electronic glass or parts containing glass.

Under the REACH Regulation, glass is classified as an UVCB (unknown or variable composition, complex reaction products or biological material) containing the elements silica, calcium, sodium, potassium, magnesium, etc... These raw materials are used to manufacture glass and react to create a new chemical substance, totally different from the starting materials. In other words, the Lead and Boron substances are chemically combined in a ceramic or glass matrix and present no hazard to humans or the environment under normal handling and use.

As such, there are no obligations under the EU REACH regulation of communication to customers and notification to ECHA for articles containing glass.

CTS confirm that materials declaration data provided for the products mentioned is accurate to the best of our knowledge.
