**Description**

Owing to their small size, light weight, and rugged characteristics, these 3.3V HCMOS extended temperature/COTS oscillators fulfill tasks not previously feasible. They are used in applications that take advantage of their extended temperature range and high performance. Twenty four different models (with and without tristate) cover -55°C to +200°C operation and provide frequency selection from 20kHz to 100MHz. They combine excellent long-term reliability, loading characteristics, and superior startup performance.

**Applications**

- Applications that require an HCMOS 3.3V clock and might be exposed to extremely harsh environmental conditions.
